<b>Costumer:</b>	<b>DRAGADOS Offshore, Spain</b>
<b>Floor systems:</b>	<b>1,000 sqm access floor type 2 with aluminium panels</b>
<b>Completion:</b>	<b>2005</b>

### Andalusia to the North Cape.

A facility for the liquefaction of natural gas was built on a floating platform in Cadiz/Spain. Approx. 1,000 sqm access floor have been installed in the switch and control facilities. Due to the weight limitation a special construction of type 2-600 had to be equipped with aluminium panels. Final destination of the platform was the Island of Melkøja located off the coast of Hammerfest/Norway where it will present the core of Europe's only export facility for liquefied natural gas in the scope of the Snøhvit project.
